

Handbook of Sensory Physiology

Filesize: 8.61 MB

Reviews

Comprehensive information! Its this sort of very good read through. This is certainly for all those who statte that there was not a worthy of studying. Your daily life period will likely be convert as soon as you total reading this publication.
(Candace Kling)

HANDBOOK OF SENSORY PHYSIOLOGY

[DOWNLOAD](#)

Condition: New. Publisher/Verlag: Springer, Berlin | This volume is a collection of essays which attempts to summarize the recent progress in the field of photoreceptor and retinal physiology. Reflecting the way in which research is organized, each author reports on the studies performed with the techniques with which he is most familiar: morphological, chemical or physiological. The first chapters describe the structure of visual cells and the histological architecture of the retina. Next comes a summary of the laws governing photochemical reactions and a report on the biochemistry of photopigments. Four articles cover the optical properties of invertebrate eyes and the electrophysiology and the interactions of their photoreceptors. These are followed by a discussion of the properties of vertebrate eyes, including chapters on optics, on the electrical responses of rods and cones and on the functional organization of the retina. The final chapter provides an extensive review of retinal biochemistry and metabolism. Even though the experimental approach differs, all studies are directed toward the solution of two basic problems: transduction in the photoreceptors and organization (often called "information processing") in the retina. The central problem of photoreceptor cells is to determine how light produces a response. We know that illumination evokes electrical changes and we have recently learned a great deal about the features of these changes. The evidence indicates however that elaborate processes must be interposed between the absorption of photons by the pigment and the production of electric currents through the membrane. These intermediary events remain to be unraveled. | 1 The Structural Organization of the Compound Eye in Insects.- 2 Rods and Cones.- 3 The Morphological Organization of the Vertebrate Retina.- 4 Interactions between Light and Matter.- 5 The Structure and Reactions of Visual Pigments.- 6 Generator Potentials in Invertebrate Photoreceptors.- 7 Responses to...
