Abstracts of Recent Published Material on Soil and Water Conservation: December 1955 (Classic Reprint) (Paperback)

By United States Department of Agriculture

FBC LTD, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Abstracts of Recent Published Material on Soil and Water Conservation: December 1955 By R. W. Simonson. Soil Sci. Soc. Amer. Proc. 18: 199-203. 1954. The purpose of this investigation was to study soil development in relation to loess thickness and annual precipitation in northwestern Iowa. From a study of six profiles located along two traverses, it was concluded that soil properties were related to both loess thickness and annual precipitation on the basis of the amount and distribution of clay, percentage of total nitrogen, base saturation, and depth to secondary lime. Differential thermal analysis, X-ray diffraction, potash content, and glycol retention on the clay fractions from hori zon samples of 5 soil series taken through out New York State are reported. It is concluded that (1) illite, present in all samples varied from 50 to 85 percent. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Reviews

This book will never be easy to start on looking at but quite entertaining to read. It is actually packed with wisdom and knowledge It is extremely difficult to leave it before concluding, once you begin to read the book.

-- Ms. Missouri Satterfield DVM

Just no terms to describe. This is for those who statte that there was not a worth studying. I am just easily can get a enjoyment of studying a written ebook.

-- Deshawn Roob
