Scolemilch Revealer.--This bases its action on phenomena not yet thoroughly understood, which presents itself when a very fine platinum wire serves as an anode in a voltmeter, with dilute acid, to which is applied electro-motive force barely superior to that necessary to produce electrolysis. In such a case a very weak current passes, which, however, increases instantaneously when the apparatus is stricken by the electric wave. A telephone inserted in the circuit indicates by its sounds these augmentations of the intensity of the current corresponding to the arrival of the waves, and...
