Createspace. Paperback. Book Condition: New. This item is printed on demand. Paperback. 268 pages. Dimensions: 9.0in. x 6.0in. x 0.6in. The purpose of the 45 articles in this volume of the The Imagineers Chronicles series is to show how changing ones perspective on the geometric structure of our universe from one of four dimensional space-time to four spatial dimensions can effect and simplify our understanding of the laws governing its evolution. Articles in this book such as the The Fabric of the Cosmos and Finding the graviton integrate common sense into our conceptual analysis of the unobservable by extrapolating our every day experiences and observations to the cosmological realm of black holes, the evolutionary history of our universe and the discovery of the graviton. While the article Solving the Measurement Problem demonstrates how one can apply logic and the existence of four spatial dimensions to resolve many of the outstanding questions in quantum mechanics such as how or if the wavefunction collapses. We believe understanding nature should be attainable to those who have a need to and are willing to work at it so each article presents the concepts in jargon free language with enough background information so that the reader will not have to do further research to understand its content. In other words we rely less on mathematics and more on conceptual logic and thought experiments (much like Albert Einstein did) to show how one can explain and predict all modern observations by redefining the space-time concepts of both The Special and General Theories of Relativity in terms of four spatial dimensions. A must read if you are interested in expanding your understanding of the reality of the unseen world of quantum mechanics and the higher dimensions of our universe. -----The universes most powerful enabling tool is not knowledge...
